

# District of Columbia Bi-Annual Environmental Disclosure Statement

July 1, 2020 - December 31, 2020

## Average Amount Of Air Emissions And Nuclear Waste Per One Megawatt-Hour (MWh) Produced From Known Sources

### Air Emissions

Average Nitrogen Oxide (NO<sub>x</sub>), Sulfur Dioxide (SO<sub>2</sub>) and Carbon Dioxide (CO<sub>2</sub>) emissions for the system mix used by AEP Energy in the PJM region as compared to the overall supply mix.

Emission Type	Pounds per MWh
Nitrogen Oxide	0.39
Sulfur Dioxide	0.47
Carbon Dioxide	836.54

CO<sub>2</sub> is a greenhouse gas which may contribute to global climate change. SO<sub>2</sub> and NO<sub>x</sub> released into the atmosphere react to form acid rain. Nitrogen Oxide also reacts to form ground level ozone, an unhealthy component of smog.

The disclosure of this information is required under D.C. Municipal Regulations - 15 DCMR §4201 *et seq.*

When you choose a retail electric supplier, that supplier is responsible for purchasing power that is added to the power grid in an amount equivalent to your electricity use. Electricity customers served by AEP Energy that are located in the District of Columbia's service territory are supplied by system power purchased from PJM, the local regional transmission organization. AEP Energy does not provide power from any particular generating facilities; rather, the PJM system power purchased by AEP Energy consists of electricity from a variety of power plants that PJM then transmits throughout the region as needed to meet the requirements of all customers in the PJM territory (including Pennsylvania, New Jersey, Maryland, Delaware, Washington, D.C., Ohio and the Commonwealth Edison territory in Illinois).

AEP Energy reports fuel sources and emissions data from PJM to its customers bi-annually, allowing customers to compare data among the companies providing electricity service in the District of Columbia. This product mix is subject to change and is updated on a bi-annual basis.

## Sources Of Electricity Supplied

### PJM System Mix

The following distribution of energy resources was used to produce electricity in the PJM Region from the system mix.

Fuel Type	Percentage by Fuel Type
Coal	21.06%
Oil	0.17%
Natural Gas	40.22%
Nuclear	33.36%
Other	0.04%
<b>Renewable Energy</b>	
Biomass	0.00%
Captured Methane Gas	0.28%
Solar Voltaic	0.47%
Solid Waste	0.52%
Water	0.91%
Wind	2.84%
Wood/Wood Waste	0.14%
Renewable Energy Subtotal	5.15%
<b>Total</b>	<b>100%</b>

The PJM system average emission levels are based on PJM data from the system mix from July 1, 2020 through December 31, 2020 from PJM Generation Attributes Tracking System (GATS).
